

NECKARGERACH PHASE 1, GERMANY

Slope Stability

Neckargerach Phase 1

Slope Stability

Project	Neckargerach Phase 1
Location	Neckargerach
Country	Germany
Year of installation	2013
Customer	Deutsche Bahn AG / Anlageplanung Karlsruhe
Engineering	gbm - NL Ettlingen
Initial situation	Neckargerach is a town located in southwest Germany between Frankfurt and Stuttgart. From time to time landslides occur along the railroad tracks. Geologists scanned the area and worked in close collaboration with Geobrugg to develop possible protection measures. The project areas were prioritized and completed in phases.
Description	In the first phase a total of 1,500 m ² of TECCO G65/3 was installed by the construction company Feldhaus. During the drilling and installation above the slope one track at a time was closed while the other line remained operational. The slope was stabilized with boundary rope (wire rope).
Protected object	Railway
Corrosion protection	GEOBRUGG SUPERCOATING
