

BIKERNIEKU TRASE - MARSHAL POST, LETTONIE

Circuits de course / Pistes d'essai

Bikernieku Trase - Marshal Post

Circuits de course / Pistes d'essai

Projet	Bikernieku Trase - Marshal Post
Ville	Riga
Pays	Lettonie
Année d'installation	2016
Client	CSDD, S.Eizensteina iela 6, Rīga, Latvija, LV – 1079
Ingénierie	Geobrugg AG
Entrepreneur	Binders
Situation de départ	<p>Bikernieku Trase is hosting the World Rallycross Event for the first time in 2016. In order to host the event a complete new rallycross circuit needs to be built.</p> <p>In order to keep race activities as safe as possible track marshals need to be placed around the circuit. Each marshal post must be placed to have clear sight to the previous and following marshal post in order to see what flags are waived by the marshals. Hence a marshal post must be relocated if required and ordered by the stewards.</p>
Description	<p>Together with its partner NORDBETON GmbH Geobrugg developed a flexible marshal post solution consisting of a concrete base with special marshal post panels on top.</p> <p>This type of design allowed a fast relocation and deployment of the marshal post in order to be flexible enough to cater special needs of the race series.</p> <p>The marshal post can be either installed free standing with an additional protection of tyre six packs or behind a guardrail. The only requirement is a even and stabilized platform to place the concrete base.</p>
Autres applications installées	Circuits de course / Pistes d'essai
Hauteur du système	3.5 m
