## Darbe koruması

Proje	Svappavaara-LKAB
Yer	Svappavaara
Ülke	İsveç
Kurulum Yılı	2016
Müşteri	LKAB Luossavaara-Kiirunavaara Aktiebolag
Durum	For the open iron ore mine in Svappavaara, which lies southeast of Kiruna, the mine operator Luossavaara-Kiirunavaara Aktiebolag (LKAB) regularly conducts blasting. Five buildings with operationally relevant infrastructure require protection against falling rocks - persons, naturally, are evacuated in these cases .
Açıklama	Sweco built steel scaffoldings for the buildings which house particularly relevant infrastructure. On top of these our nets <a href="#">MAXX S4-130</a> and <a href="#">ROMBO G80/4</a> were installed in two layers. They come along with the largest brakes: U300-rod brakes with a capacity of 3,000 kJ. Complete installation around the 3,400 m² protected area was completed in only six weeks.
Gösterilen obje	Infrastructure
Sistem boyu	N/A
