

WISEMANSBRIDGE PEMBROKEKESHIRE, REINO UNIDO

Proteção contra desprendimentos

Wisemansbridge Pembrokeshire

Proteção contra desprendimentos

Projeto	Wisemansbridge Pembrokeshire
Lugar	Saundersfoot
País	Reino Unido
Ano de instalação	2016
Promotor	Pembrokeshire County Council
Empreiteiro	Geobrugg
Contratante	ABCAS
Situação inicial	After winter storms a small landslide had accured east of our existing 2014 installation.
Descrição	<p>It was decided to build an additional 60 m of GBE-100A-R barrier to protect the coast path and the public.</p> <p>The day after the installation period an additional rock fall occurred. The foot path was able to remain open as the materials stayed behind the barrier. The fence was then lowered, cleared and repaired. A small section of 6 metres of TECCO G80/4 material was ordered to make the fence look as new. No mesh destruction was detected.</p> <p>Impact, December 2020</p> <p>Not only the rockfall barrier worked perfectly. Also, the Geobrugg GUARD, installed in February 2020, did its job by detecting the impact and monitoring the high corrosion rate in this coastal environment (see pictures).</p>
Objecto protegido	Infra-estrutura turística
Outras aplicações instaladas	Monitoring
Proteção contra a corrosão	GEOBRUGG SUPERCOATING
Absorção de energia máxima	100 kJ
Altura do sistema	2.0 m
Comprimento do sistema	60 m
