Защита от осколков

Svappavaara-LKAB

Защита от осколков

Проект	Svappavaara-LKAB
Место	Svappavaara
Страна	Швеция
Год установки	2016
Клиент	LKAB Luossavaara-Kiirunavaara Aktiebolag
Ситуация	For the open iron ore mine in Svappavaara, which lies southeast of Kiruna, the mine operator Luossavaara-Kiirunavaara Aktiebolag (LKAB) regularly conducts blasting. Five buildings with operationally relevant infrastructure require protection against falling rocks - persons, naturally, are evacuated in these cases .
Описание	Sweco built steel scaffoldings for the buildings which house particularly relevant infrastructure. On top of these our nets MAXX S4-130 and ROMBO G80/4 were installed in two layers. They come along with the largest brakes: U300-rod brakes with a capacity of 3,000 kJ. Complete installation around the 3,400 m² protected area was completed in only six weeks.
Защищаемый объект	Инфраструктура
Высота системы	N/A
